Journal of Power Sources 52 (1994) 317–320

JOURNAL OF POWER SOURCES

Subject Index of Volume 52

Acetylene black
pretreatment of acetylene black: influence on electrochemical behaviour, 123
Active-material utilization
effect of plate preparation on active-material utilization and cycleability of positive plates in automotive lead/acid batteries, 159
Alkaline media
electrochemical oxidation of ethanol on Pt(hkl) basal surfaces in NaOH and Na_2CO_3 media, 109
Alkaline zinc batteries
identification of organic corrosion inhibitors suitable for use in rechargeable alkaline zinc batteries, 217
Aluminium
electrosynthesis of layered double hydroxides of nickel with trivalent cations, 93
Antimony
the effect of alloying with antimony on the electrochemical properties of lead, 17
kinetics of the formation process of PbO_2 on lead–antimony electrodes, 193
Automotive lead/acid batteries
effect of plate preparation on active-material utilization and cycleability of positive plates in automotive lead/acid batteries, 159

Batteries
internal resistance and cathode content in silver borovanadate batteries, 129
the development of a high-power automatic battery test facility, 251
Battery performance
a chemometric evaluation of battery performance under overcharge conditions, 87
Boron
internal resistance and cathode content in silver borovanadate batteries, 129

Capacity
a quick method of measuring the capacity versus discharge rate for a dual lithium-ion insertion cell undergoing cycling, 211
Carbon
cathodic oxygen reduction on noble metal and carbon electrodes, 1
Carbon fibres
carbon fibres and natural graphite as negative electrodes for lithium ion-type batteries, 55
Carbon–lithium
carbon fibres and natural graphite as negative electrodes for lithium ion-type batteries, 55
Cathode
internal resistance and cathode content in silver borovanadate batteries, 129
Cathodic oxygen reduction
cathodic oxygen reduction on noble metal and carbon electrodes, 1
Ceramic
polymer–ceramic composite electrolytes, 261
Chemical composition
chemical and phase composition of manganese oxides obtained by Mn(II) oxidation in nitrate solutions, 49
Chemical oxidation
large discharge capacity from carbon electrodes in sulfuric acid with oxidant, 69
Chemometric evaluation
a chemometric evaluation of battery performance under overcharge conditions, 87
Chromium
electrosynthesis of layered double hydroxides of nickel with trivalent cations, 93
Citric acid
electrochemical behaviour of lead electrode in sulfuric acid solution containing citric acid, 25
Corrosion
gasometric corrosion-rate studies of magnesium alloy in magnesium batteries, 305
Corrosion inhibitors
identification of organic corrosion inhibitors suitable for use in rechargeable alkaline zinc batteries, 217
Cycle life
cycle life test of lead dioxide electrodes in compressed lead/acid cells, 99
Cycling
a quick method of measuring the capacity versus discharge rate for a dual lithium-ion insertion cell undergoing cycling, 211

Discharge behaviour
large discharge capacity from carbon electrodes in sulfuric acid with oxidant, 69
Discharge rate
a quick method of measuring the capacity versus discharge rate for a dual lithium-ion insertion cell undergoing cycling, 211
Doping
thermoelectric power measurement of lithium vanadate ceramics doped with chromium oxide, 309

Electrical resistivity
overcharge in the vanadium redox battery and changes in electrical resistivity and surface functionality of graphite-felt electrodes, 61
Electrochemical systems
thermoelectric effects in electrochemical systems. Nonconventional thermogalvanic cells, 231

Elsevier Science S.A.

Electrodes
cathodic oxygen reduction on noble metal and carbon electrodes, 1
overcharge in the vanadium redox battery and changes in electrical resistivity and surface functionality of graphite-felt electrodes, 61
electrochemical oxidation of ethanol on Pt(hkl) basal surfaces in NaOH and Na_2CO_3 media, 109
kinetics of the formation process of PbO_2 on lead–antimony electrodes, 193
surface of lithium electrodes prepared in $Ar+CO_2$ gas, 197
Electrosynthesis
electrosynthesis of layered double hydroxides of nickel with trivalent cations, 93
Ethanol
electrochemical oxidation of ethanol on Pt(hkl) basal surfaces in NaOH and Na_2CO_3 media, 109

Failure
failure process of Li/$SOCl_2$ cells at 200 °C, 119
Failure mode
failure mode of the negative plate in recombinant lead/acid batteries, 201
Ferroelectric status
thermoelectric power measurement of lithium vanadate ceramics doped with chromium oxide, 309
Fluid dynamic study
fluid dynamic study of fuel cell devices: simulation and experimental validation, 243
Formation process
kinetics of the formation process of PbO_2 on lead–antimony electrodes, 193
Fuel cells
pretreatment of acetylene black: influence on electrochemical behaviour, 123
the dynamic performance of a molten carbonate fuel cell in power-generation systems, 179
intermediate temperature fuel cells with electrolytes based on oxyacid salts, 289
Fuel cell stacks
fluid dynamic study of fuel cell devices: simulation and experimental validation, 243

Gasometric studies
gasometric corrosion-rate studies of magnesium alloy in magnesium batteries, 305
Graphite felt
overcharge in the vanadium redox battery and changes in electrical resistivity and surface functionality of graphite-felt electrodes, 61
Graphite intercalation compounds
large discharge capacity from carbon electrodes in sulfuric acid with oxidant, 69

Hydrogen reference electrode
distinct performance evaluation of a direct methanol SPE fuel cell. A new method using a dynamic hydrogen reference electrode, 77
Hydrogen-storage alloy powders
low-temperature surface micro-encapsulation of Ti_2Ni hydrogen-storage alloy powders, 295

Indirect internal reforming
molten carbonate fuel cell with indirect internal reforming, 41
Interfacial properties
determination of thermodynamic, kinetic and interfacial properties for the Li//$Li_xMn_2O_4$ system by electrochemical techniques, 185
Intermediate temperature
intermediate temperature fuel cells with electrolytes based on oxyacid salts, 289
Internal resistance
internal resistance and cathode content in silver borovanadate batteries, 129
Interstratification
new manganese-substituted nickel hydroxides Part 2. Interstratification process upon ageing, 275
Iron
electrosynthesis of layered double hydroxides of nickel with trivalent cations, 93

Kinetics
methane/steam reforming kinetics for solid oxide fuel cells, 283

Lanthanum oxide
solid-state batteries with ferroelectric sodium vanadate doped with lanthanum oxide, 301
Layered double nickel hydroxides
electrosynthesis of layered double hydroxides of nickel with trivalent cations, 93
Lead
kinetics of the formation process of PbO_2 on lead–antimony electrodes, 193
Lead/acid batteries
the effect of alloying with antimony on the electrochemical properties of lead, 17
electrochemical behaviour of $SnSO_4$ in sulfuric acid solution, 81
cycle life test of lead dioxide electrodes in compressed lead/acid cells, 99
a novel, non-destructive method for the prediction of the state-of-charge of maintenance-free lead/acid batteries from galvanostatic transients, 135
advantages and disadvantages of valve-regulated, lead/acid batteries, 149
failure mode of the negative plate in recombinant lead/acid batteries, 201
Lead alloys
the effect of alloying with antimony on the electrochemical properties of lead, 17
Lead dioxide
cycle life test of lead dioxide electrodes in compressed lead/acid cells, 99
Lead electrodes
electrochemical behaviour of lead electrode in sulfuric acid solution containing citric acid, 25
Lead–tin alloys
X-ray photoelectronspectroscopy study of passive layers formed on lead–tin alloys, 31
Lithium
failure process of Li/$SOCl_2$ cells at 200 °C, 119
determination of thermodynamic, kinetic and interfacial properties for the Li//$Li_xMn_2O_4$ system by electrochemical techniques, 185
surface of lithium electrodes prepared in $Ar+CO_2$ gas, 197
Lithium-ion batteries
carbon fibres and natural graphite as negative electrodes for lithium ion-type batteries, 55
Lithium-ion insertion cell
a quick method of measuring the capacity versus discharge rate for a dual lithium-ion insertion cell undergoing cycling, 211

Magnesium alloys
gasometric corrosion-rate studies of magnesium alloy in magnesium batteries, 305
Magnesium batteries
gasometric corrosion-rate studies of magnesium alloy in magnesium batteries, 305
Maintenance-free
a novel, non-destructive method for the prediction of the state-of-charge of maintenance-free lead/acid batteries from galvanostatic transients, 135
Manganese
electrosynthesis of layered double hydroxides of nickel with trivalent cations, 93
determination of thermodynamic, kinetic and interfacial properties for the $Li//Li_xMn_2O_4$ system by electrochemical techniques, 185
new manganese-substituted nickel hydroxides. Part 1. Crystal chemistry and physical characterization, 269
new manganese-substituted nickel hydroxides. Part 2. Interstratification process upon ageing, 275
Manganese oxides
chemical and phase composition of manganese oxides obtained by Mn(II) oxidation in nitrate solutions, 49
Methane/steam reforming
methane/steam reforming kinetics for solid oxide fuel cells, 283
Methanol fuel cells
distinct performance evaluation of a direct methanol SPE fuel cell. A new method using a dynamic hydrogen reference electrode, 77
Micro-encapsulation
low-temperature surface micro-encapsulation of Ti_2Ni hydrogen-storage alloy powders, 295
Molten carbonate fuel cell
molten carbonate fuel cell with indirect internal reforming, 41

Negative plate
failure mode of the negative plate in recombinant lead/acid batteries, 201
Nickel
low-temperature surface micro-encapsulation of Ti_2Ni hydrogen-storage alloy powders, 295
Nickel–hydrogen cells
reactions during reversal of an $Ni–H_2$ cell, 223
Nickel hydroxides
electrosynthesis of layered double hydroxides of nickel with trivalent cations, 93
new manganese-substituted nickel hydroxides. Part 1. Crystal chemistry and physical characterization, 269
new manganese-substituted nickel hydroxides. Part 2. Interstratification process upon ageing, 275
Noble metal
cathodic oxygen reduction on noble metal and carbon electrodes, 1

Organic inhibitors
identification of organic corrosion inhibitors suitable for use in rechargeable alkaline zinc batteries, 217
Overcharge
a chemometric evaluation of battery performance under overcharge conditions, 87
Oxyacid salts
intermediate temperature fuel cells with electrolytes based on oxyacid salts, 289
Oxygen
cathodic oxygen reduction on noble metal and carbon electrodes, 1

Parametric analysis
prismatic thionyl chloride cell characterization through parametric analysis, 173
Passive layers
X-ray photoelectronspectroscopy study of passive layers formed on lead–tin alloys, 31
Performance
advantages and disadvantages of valve-regulated, lead/acid batteries, 149
Phase composition
chemical and phase composition of manganese oxides obtained by Mn(II) oxidation in nitrate solutions, 49
Phase transition
thermoelectric power measurement of lithium vanadate ceramics doped with chromium oxide, 309
Photovoltaic array system
performance analysis of photovoltaic-powered water-pumping systems using switched reluctance motor drives, 141
Plate preparation
effect of plate preparation on active-material utilization and cycleability of positive plates in automotive lead/acid batteries, 159
Platinum
electrochemical oxidation of ethanol on Pt(hkl) basal surfaces in NaOH and Na_2CO_3 media, 109
Polymer composite electrolytes
polymer–ceramic composite electrolytes, 261
Polymer electrolytes
carbon fibres and natural graphite as negative electrodes for lithium ion-type batteries, 55
Porous electrodes
cycle life test of lead dioxide electrodes in compressed lead/acid cells, 99
pretreatment of acetylene black: influence on electrochemical behaviour, 123
Power-generation system
the dynamic performance of a molten carbonate fuel cell in power-generation systems, 179
Pressurized cells
cycle life test of lead dioxide electrodes in compressed lead/acid cells, 99
Pumping systems
performance analysis of photovoltaic-powered water-pumping systems using switched reluctance motor drives, 141

Rechargeable batteries
identification of organic corrosion inhibitors suitable for use in rechargeable alkaline zinc batteries, 217
Reversal reactions
reactions during reversal of an $Ni–H_2$ cell, 223

Salt–alumina ceramic composite materials
intermediate temperature fuel cells with electrolytes based on oxyacid salts, 289
Silver
internal resistance and cathode content in silver borovanadate batteries, 129
Sodium vanadate
solid-state batteries with ferroelectric sodium vanadate doped with lanthanum oxide, 301
Solid oxide fuel cells
methane/steam reforming kinetics for solid oxide fuel cells, 283
Solid-state batteries
solid-state batteries with ferroelectric sodium vanadate doped with lanthanum oxide, 301

State-of-charge
a novel, non-destructive method for the prediction of the state-of-charge of maintenance-free lead/acid batteries from galvanostatic transients, 135
Sulfuric acid
electrochemical behaviour of lead electrode in sulfuric acid solution containing citric acid, 25
large discharge capacity from carbon electrodes in sulfuric acid with oxidant, 69
electrochemical behaviour of $SnSO_4$ in sulfuric acid solution, 81

Test facility
the development of a high-power automatic battery test facility, 251
Texture
large discharge capacity from carbon electrodes in sulfuric acid with oxidant, 69
Thermoelectric power
thermoelectric power measurement of lithium vanadate ceramics doped with chromium oxide, 309
Thermogalvanic cells
thermoelectric effects in electrochemical systems. Nonconventional thermogalvanic cells, 231
Thionyl chloride cells
failure process of $Li/SOCl_2$ cells at 200 °C, 119
prismatic thionyl chloride cell characterization through parametric analysis, 173
Tin sulfate
electrochemical behaviour of $SnSO_4$ in sulfuric acid solution, 81
Titanium
low-temperature surface micro-encapsulation of Ti_2Ni hydrogen-storage alloy powders, 295

Valve-regulated lead/acid batteries
advantages and disadvantages of valve-regulated, lead/acid batteries, 149
Vanadium
internal resistance and cathode content in silver borovanadate batteries, 129
Vanadium redox batteries
overcharge in the vanadium redox battery and changes in electrical resistivity and surface functionality of graphite-felt electrodes, 61
